Save our Earth

Our Earth is our home but she is getting very sick. If we don't save our Earth, she won't be a suitable home for us. We should all fight against pollution.

I want to talk about water pollution. First, people throw rubbish into the sea. Factories discharge sewage into the rivers. There are also oil spills. Moreover, people use too much shampoo, shower gel and detergent.

To fight against water pollution, we should do something to save our Earth. We can use less water by taking showers instead of baths. We can also save water when we use the water for washing rice to water plants. We should never throw rubbish into the sea or rivers. Most importantly, the government should treat sewage before discharging it into the sea. These ideas will reduce the pollution of water greatly.

I hope everyone will take action and live a green life before it is too late. Our Earth will be a better place to live.
